Allowable Subject Matter

1. Claims 1-2 are allowed.

2. The following is an examiner's statement of reasons for allowance: Schulz et al. US 5,529,538 (Schulz) shows in Figs. 1-4 a universal joint boot comprising: a cylindrical bellows part (42) having valleys and peaks formed continuously in a repetitive manner (Fig. 1) and being extendible and contractible (Fig. 2); a ring-shaped mounting part (52) formed at one end of the bellows part and into which a case (12) for receiving one member of two members moving relatively to each other is inserted (Fig. 1); and a seal lip (70) formed toward a peripheral direction of an inner peripheral surface of the ring-shaped mounting part to which the case is mounted (Fig. 4), and the inner peripheral surface having protrusions (68) protruding toward an axial center of the ring-shaped mounting part.

Schulz does not clearly show a height of the seal lip becoming lower from a bottom of the protrusion to a peak and a width of the seal lip becoming wider from the bottom of the protrusion to the peak. What is shown may be a result of the given perspective view.

Tomonori et al. JP2005233398 (Tomonori) shows in Figs. 1-10 a universal joint boot comprising: a cylindrical bellows part (16) having valleys and peaks formed continuously in a repetitive manner and being extendible and contractible; a ring-shaped mounting part (11) formed at one end of the bellows part and into which a case (201) for receiving one member of two members moving relatively to each other is inserted; and a seal lip (12) formed toward a peripheral direction of an inner peripheral surface of the ring-shaped mounting part to which the

Art Unit: 3679

case is mounted, and the inner peripheral surface having protrusions (11b) protruding toward an axial center of the ring-shaped mounting part.

Once more, Tomonori does not show or suggest a height of the seal lip becoming lower from a bottom of the protrusion to a peak and a width of the seal lip becoming wider from the bottom of the protrusion to the peak. These features are useful in improving sealing performance between the cup and the boot. At the time of the invention, it would not have been obvious to one having ordinary skill in the art to produce such features as this.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
